

**--ABSTRACT OF THE DISCLOSURE**

The invention relates to a method for producing concrete stones during which a number of individually selectable separate molds can be placed on a base frame, and the base frame X is fitted with a number of selected separate molds A, B, C and D. The separate molds A, B, C and D are detachably joined to the base frame X in order to hold the separate molds A, B, C and D in place. The separate molds A, B, C and D are filled with liquid concrete material. Hardened concrete stones are removed from the separate molds A, B, C and D, after which the separate molds A, B, C and D are detached from the base frame X.--
